WHAT IS CHANGED?

#bcopendiscussion

With Business Central 2021 release wave 2, the **ShowMyCode** setting has been replaced by the **resourceExposurePolicy** setting which offers a richer access control.

The **ShowMyCode** will be deprecated in a future release and can't be used together with the resourceExposurePolicy setting. If ShowMyCode is set, default values for resourceExposurePolicy will be applied (false).

ALLOWDEBUGGING

#bcopendiscussion

To allow debugging into your extension, you must set the `allowDebugging` flag when the extension is taken as a dependency, otherwise debugging isn't allowed. The default value of `allowDebugging` is `false`.

[NonDebuggable] attribute can be set on methods and variables.

ALLOWDOWNLOADINGSOURCE

#bcopendiscussion

When this flag is set to true in the app.json file of extension A, the source code and any media files of extension A can be downloaded.

INCLUDESOURCEINSYMBOLFILE

#bcopendiscussion

When `includeSourceInSymbolFile` is set to false, the source isn't available in the symbol files, and you can't use Go to Definition to view source.

however, still extend, get IntelliSense for, and call functionality in extension A by relying on its exposed symbols and signatures. The default value of `includesourceInSymbolFile` is false.
