QUESTION 171

#bcopendiscussion

Query JSON Codeunit API?

I have written a sample codeunit 50100 function ReadJson2 to browse a JSON file, and this populates the customer masters into a staging table in BC and is working as expected. But when I try to expose the same codeunit as Web Service and try to test my function using Postman, I am getting the below error. However the JSON example above is requested in the postman body and I am expecting the 3rd party API call to populate the staging data.

API Request:

```
{
  "Customers": [
    {
      "customerNo": "16933",
      "customerName": "ABC Private Limited",
      "phone": {
        "phoneCountryCode": "+91",
        "phoneCountryCode": "9849098490"
      }
    },
    {
      "customerNo": "17001",
      "customerName": "DEF Private Limited",
      "phone": {
        "phoneCountryCode": "+91",
        "phoneCountryCode": "9849098491"
      }
    }
  ]
}
```

API Response:

```
{
  "error": {
    "code": "BadRequest",
    "message": "One or more errors occurred. CorrelationId: ab3dce35-f7b9-45ed-8ea7-7151bef5353e."
  }
}
```

As per the understanding from Microsoft documentation (<https://learn.microsoft.com/en-us/dynamics365/business-central/dev-itpro/developer/devenv-creating-and-interacting-with-odatav4-unbound-action>), example Data ({ "inputJson": "{ \"str\": \"Hello world!\", \"confirm\": true }" }) .and has been advised to follow the request body in Postman which is working fine for batch request. But 3rd party s not agreeing to send with slash separator and they require the input to be sent as like JSON array request through Text parameter.

Kindly help or advise how do I get solution to meet the requirement in BC. Appreciate if you can share any sample working example which meets my criteria. Attaching the objects for references and also the postman collection.

QUESTION 172

#bcopendiscussion

How to Use Expand Parameter in Business Central API?

#bcopendiscussion

Thank You!

See You Next Meeting.
