- A Total of 80 Questions were discussed in 2020.

We will be happy to add more presenters. If you want to be the presenter please let us know.

Next Meeting Details – 22/May/21

- Link To Register.
- Register Link Expires – 21 May 2021 (03:00 PM IST)
- Topic – Open Discussion.
- Time – 09:30 PM to 10:30 PM (IST)
- Questions – Add Here.

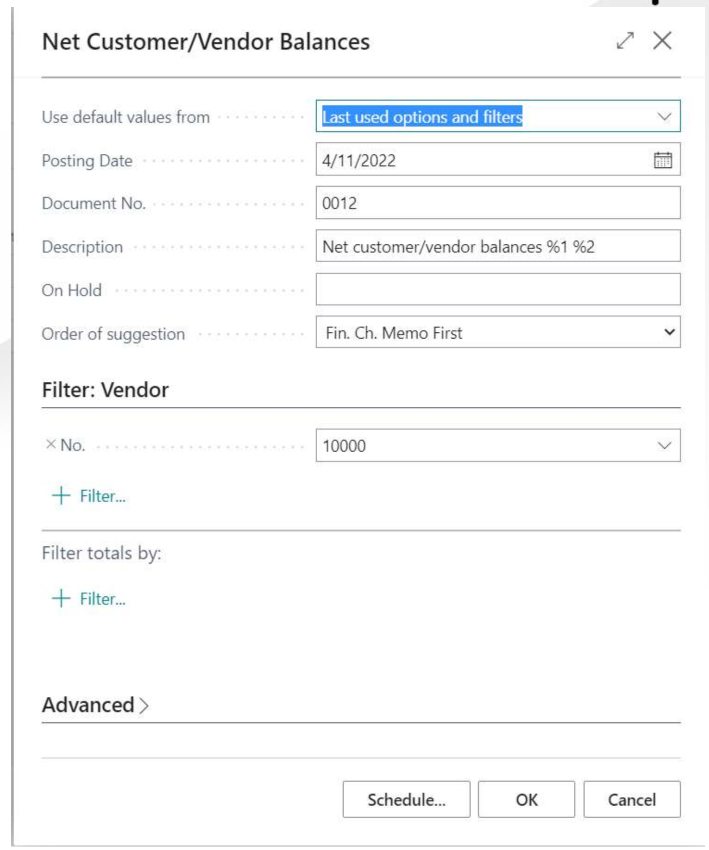
Consolidate customer and vendor balances

#bcopendiscussion

- You can turn a contact company into a customer or vendor by using the **Create as Customer** or **Create as Vendor** actions on the **Contact Card** page.

- This link is a prerequisite for seeing the **Balance as Vendor** field on the **Customer** page and the **Balance as Customer** field on the **Vendor** page.

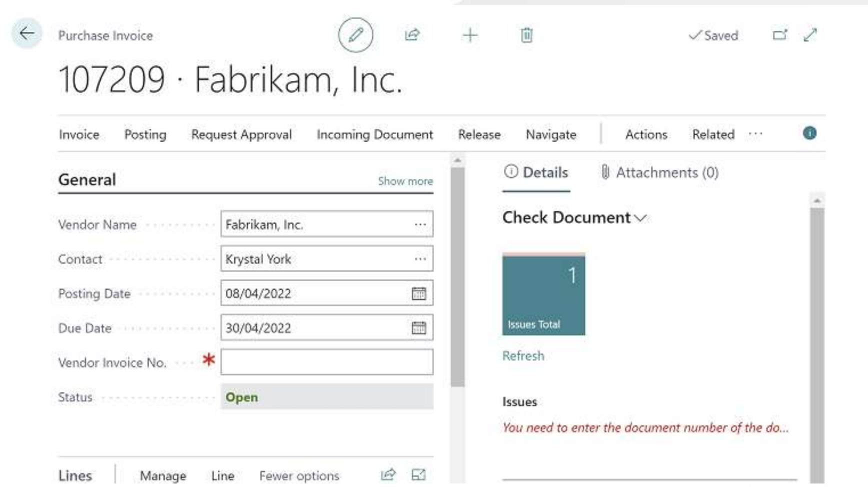
- On the **Payment Journal** page, you can use the **Net Customer/Vendor Balances** action to net the customer and vendor balances for the company.



Check documents and journals in while you work

#bcopendiscussion

- enables Feature: Check documents and journals while you work.
- Enable Data Check toggle on the General Ledger Setup page.
- If you turn on the Enable Data Check toggle on the General Ledger Setup page, a notification will display on documents where the check document capability is available.
- If you want to stop using Document Check, you can turn off the Show the Document Check FactBox toggle on the My notifications page.



CONTEXT-AWARE LINKS IN THE HELP PANE FROM MICROSOFT AND PARTNERS

#bcopendiscussion

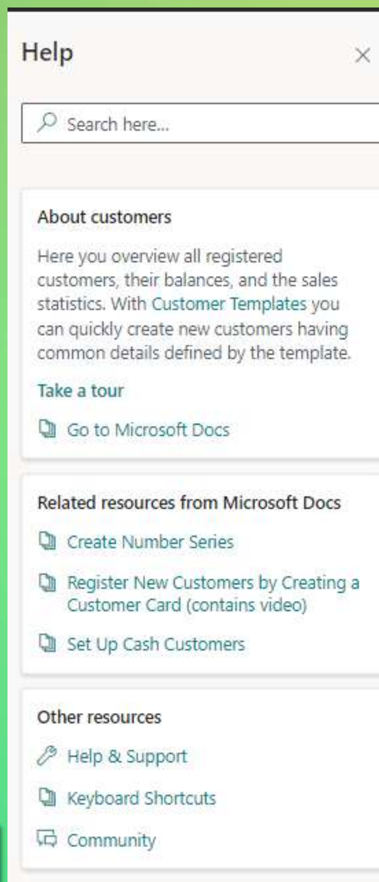
- ❑ **Users can self-educate and self-unblock in their journey with Business Central. This is especially relevant in the onboarding phase when customers historically relied on our partners and their consultants for training.**

- ❑ In 2022 release wave 1, Dynamics 365 Business Central will be able to serve context-aware links to guidance and learning to help flatten the learning curve and unblock the individual user in performing business processes.

- ❑ Shortcut – **Ctrl + F1**

Help and Support

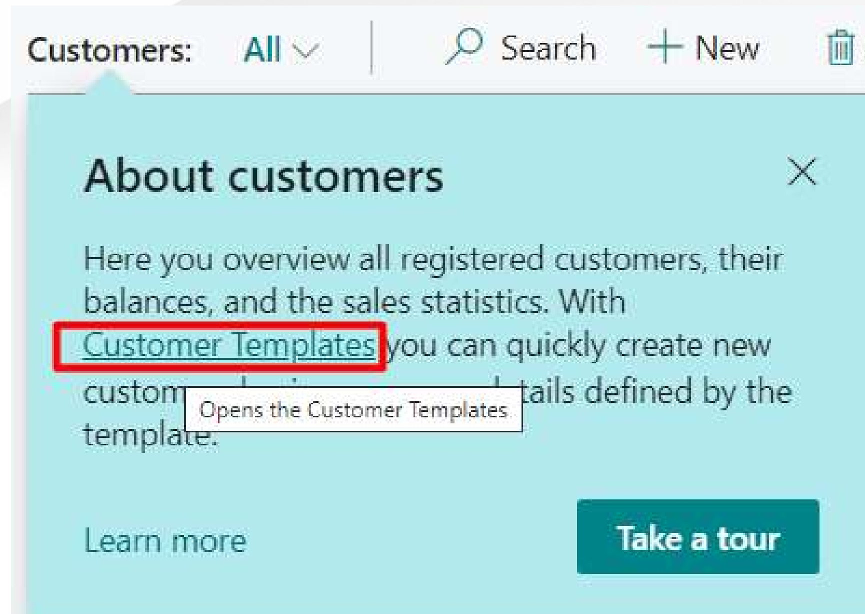
- ❑ Search for Business Central Documentation.
- ❑ Help Specific To Page you are currently in.
- ❑ Take a Tour on the page.
- ❑ Navigate to Community.



Support for rich text in teaching tips and tours

#bcopendiscussion

- ❑ Teaching Tip was already added in the product with Previous releases.
- ❑ With 2022 Release Wave 1, Microsoft have expanded the capability to allow partners to mark up rich text in teaching tip.
- ❑ You can also add a link to other in-app entities from a teaching tip, which supports users in finding and understanding business process flows more easily.



- ❑ To Make Text bold place your text between ***
- ❑ For Hyperlink Place
- ❑ > Hyperlink Text between **[ ]**
- ❑ **>** Hyperlink between **( )**
- ❑ **>** Hyperlink in format **?** Object type **=** object id

TOUR OF THE ROLE EXPLORER AND HOW TO FILTER IT

#bcopendiscussion

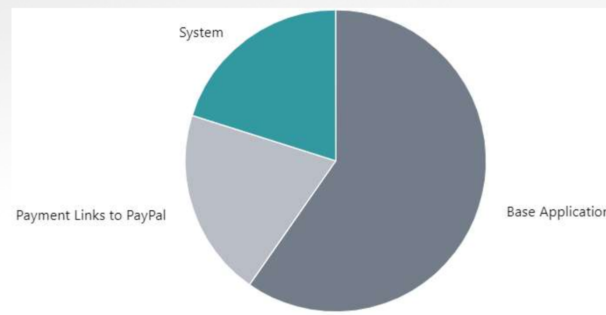
- ❑ Some roles can take a tour of their Home page, the Role Centre, as the first task in their Get Started checklist.
- ❑ This tour will now be expanded with more steps to highlight where to find settings and options for personalization in the Settings menu.
- ❑ This is important, especially in non-evaluation companies where users want to dive into settings or change their role to a more relevant one.

In-client performance profiler

#bcopendiscussion

- In 2021 Release Wave 2, Microsoft added AL Performance profiler to the visual studio code.
- The Performance profiler has empowered developer to investigate performance.

- In 2022 Release Wave 1, Microsoft extended that capability for consultant/power users.
- With this feature consultant will be able to investigate with involved extension.
- The in-client performance profiler will be a new app page that can be reached on its own or from the Help & Support page.
- The page will contain actions to start and stop the capture of a user flow.
- You will be able to see the performance results of a capture, including time spent per involved extension, top method calls, and other metrics.
- You'll also be able to download the capture so that you can share it with technical support or a pro developer



USABILITY IMPROVEMENTS TO THE WEB CLIENT

#bcopendiscussion

Navigation

- ❑ Peek Preview Enhancement. (Item Charge)
- ❑ When a FastTab expands, the page scrolls up.

Data entry

•When a message dialog interrupts typing into the next field, the characters you entered are no longer discarded.

•The web client preserves a few empty lines at the end of an editable list so that filling out data vertically across rows never runs out of space.

New Telemetry

#bcopendiscussion

- When a user gets an error dialog, it is logged to telemetry. Partners can get insights into which errors users get in their setup and help users get unblocked.
- The Business Central platform will emit a pseudo user ID to telemetry. This will allow a troubleshooter to identify which data in telemetry corresponds to a given user.
- When a user enables detailed telemetry from the Help and Support page, the action is also logged to telemetry. A follow-up event is logged when the session leaves detailed logging.
- If a database deadlock occurs, the Business Central server will log an event to partner telemetry.
- Using telemetry, partners can get insights into which AL code paths trigger database deadlock situations for users.
- If an error message is shown to the user, the error dialog will show the wording Was this message useful? with a choice to vote Yes or No. The result is then logged to telemetry.
- The Business Central server will now emit the **CompanyName** with every call to AL LogMessage methods.
- When changes happen to an environment, such as updates, restores, renames, or deletion, the signal is emitted to the environment telemetry resource in Application Insights.
- When a user gets an error dialog due to a permission error, it is now logged to telemetry.

#bcopendiscussion

Thank You!

See You Next Meeting.
