QUESTION 150

Is there a way to directly integrate a SQL database with Business Central using extensions?

Scenario: We have a database and a server but are unable to open it in NAV. Now we want to somehow extract the data directly into Business Central tables.

I looked it up and came across this and now I'm trying to understand how it might work.

https://demiliani.com/2019/09/16/dynamics-365-business-central-wave-2-on-premise-and-direct-sql-integrations/

# QUESTION 151

Hi Saurav,

Regarding the latest Microsoft announcement for BC Universal Code initiative. I was reading some material in internet, why they allowed Code Customized Base App. I came across a Blog from Waldo regarding 3 type of customizations that cause in ability to move to extensions. Could you give us some idea, how to handle this impediment from the article,

1. .Net / Client-side resources / ...: Custom made dll's, like reading scales, direct access to SQL Server, ftp, ... these kind of fancy things.

UNIVERSAL CODE.

Objective

1. **All future customers** should be able to choose Dynamics 365 Business Central online and find the apps they need on Microsoft AppSource

2. **Existing customers** want to see a vision of how their partners will support them in their digital transformation journey

3. Cloud-first partners spend less time on upgrade projects and have more capacity **to provide industry value and serve more customers**

4. When partner code is isolated from Microsoft base app code, **we open doors for innovation**

5. **Replace legacy programs** 'Registered Solution Program' and 'Certified for Microsoft Dynamics program'
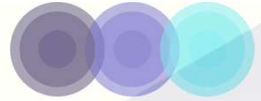

From Q4 CY22 onwards,
- Technical enforcement will be introduced in Business Central where only "Universal code" is allowed as additional code in customer environments.
- Non-universal code modules can be licensed to allow "non-Universal code" in customer environments.

Non-Universal Code fees- Pricing is a per for full user (Premium & Essentials), per year fee

Recurring fee(s) over time	"Implemented code is not in extensions"	"Implemented code is not cloud-optimized"
2022	0$	0$
2023	75$	0$
2024	125$	75$
2025	250$	175$
2026...	TBD	TBD

UNIVERSAL CODE.

## Scenario 3: We are reselling non-Universal Code offerings to existing customers?

▪ Existing customers licensed **before April 2022** are not required to license the non-Universal Code modules in their current configuration.

▪ Existing customers transitioning to BCOP **from April 2022** will need to license the modules if non-universal code is used. (Typical scenario would be when upgrading from NAV to Business Central).

April 1st, 2022	Q4 CY22	Jan 1st 2023...
• Customers licensed on Business Central on-premises **before** this date _will **not** be impacted_ with non-universal code fees	• Technical enforcement will be introduced to all supported Business Central platform versions	• Non-universal code fees will be charged when non-universal code is licensed by impacted customers
• Customers licensed on Business Central on-premises **after** this date _will be impacted_ by non-universal code fees from Q1 CY23 when non-universal code is licensed	• Non-universal code modules will be required when non-universal code is licensed by impacted customers	
	• Non-universal code modules are exempt from fees in 2022
